

STEFAN NEAGA

AI Engineer

Braşov, Romania | neagastefan@gmail.com | github.com/neagastefan99 | linkedin.com/in/stefan-neaga-21452b197

SUMMARY

AI Engineer at METRO.digital with 4+ years of full-stack experience across Java, React and Google Cloud. Building agentic AI solutions end-to-end — from databases and backend services to Terraform-managed GCP infrastructure — including specialized chat systems powered by business data intelligence.

EXPERIENCE

AI Engineer — Agentic AI Squad

METRO.digital

Jun 2026 – Present

- Building AI agents that automate and support different parts of the business, with end-to-end ownership across the stack.
- Full-stack delivery: database design, backend services, infrastructure-as-code with Terraform, all hosted on Google Cloud Platform.
- Developing specialized chat systems with business data intelligence for domain-specific business problems.

Full Stack Developer

METRO.digital

Jun 2022 – Jun 2026

- Built and modernized enterprise applications for one of Europe's largest wholesale retailers.
- Led the migration of a legacy Oracle Forms application to a modern Java + React stack.
- Migrated invoice-printing from Oracle Reports to Flying Saucer, replacing a fragile legacy pipeline.
- Deployed and scaled cloud-native services on Google Cloud Platform; Agile (Scrum/Kanban).

Java Trainee

METRO.digital

2022

Built a strong foundation in Java, object-oriented design, clean code principles and Agile methodologies.

SKILLS

Languages	Java, Python, TypeScript, JavaScript, SQL, HTML/CSS
Backend	Spring Framework, REST APIs, Oracle DB, PostgreSQL
Frontend	React, Next.js, Tailwind CSS
Cloud & DevOps	Google Cloud Platform, Terraform, Docker, Git, GitHub, CI/CD
AI & Agents	Agentic AI, LLM Integration, RAG, Chat Systems, Data Intelligence

SELECTED PROJECTS

- UndePescuim.ro** — interactive map of Romania's fishing waters (767+ locations, ANPA permit data, OpenStreetMap geometry) built with Next.js, Leaflet and geodata pipelines; deployed on Vercel. undepescuim.vercel.app
- Kindle Deals Bots** — automated daily scraping bots (Python, curl_cffi, Telegram API) that detect and deliver discounted Kindle books to personal channels — zero-cost cron infrastructure. github.com/neagastefan99/kindle-deals-bot
- Personal Site** — DCC-inspired portfolio built with Next.js 16, Tailwind v4 and shadcn/ui. neagastefan99.github.io/personal-site

EDUCATION

Engineer's Degree, Automotive Engineering

2018 – 2022

Universitatea Transilvania din Braşov
